

Database Architecture

Version: 3

Status: PENDING_REVIEW

Owner: Senior Engineer

Section 1: Overview

This document defines the architecture under consideration. The proposed approach uses PostgreSQL with logical replication.

Section 2: Rationale

This approach was evaluated against alternatives for scalability, operational cost, and long-term maintainability.

Section 4.2: Decision

The architecture for Database Architecture uses PostgreSQL with logical replication and read replicas going forward.

Section 5: Rollout

Rollout is planned across all affected business units within two quarters.
